Summary

Senior backend engineer with 7 years building distributed payment systems in Go and Python. Previously at FinTechCo and CloudPay. Strong on PostgreSQL, Kafka, and AWS. Comfortable mentoring mid-level engineers and driving architecture reviews.

Work experience

Senior Backend Engineer — FinTechCo (2022 – present)

- Designed and shipped a Go-based payment-routing service handling 4M tx/day with p99 latency under 80ms.
- Led a 4-engineer team migrating the legacy monolith to gRPC microservices over 9 months; cut deploy time from 45m to 6m.
- Reduced PostgreSQL replication lag from 12s to under 500ms by partitioning the high-write `transactions` table.
- Mentor for 3 mid-level engineers; ran a weekly internal "deep dive" session on distributed-systems fundamentals.

Backend Engineer — CloudPay (2019 – 2022)

- Built the company's first Kafka-based event bus; replaced 4 polling cron jobs with real-time consumers.
- Owned the merchant-onboarding API end-to-end; took it from 2.1s p95 to 320ms by rewriting the credit-bureau integration layer.
- Wrote the internal RFC process for backend services; ~40 RFCs shipped during my tenure.

Junior Software Engineer — StartupX (2017 – 2019)

- Built the company's mobile-app authentication backend in Python (Django) and Redis.
- First engineer on call; established the runbook discipline.

Education

- B.Sc. Computer Engineering — Universidad de Costa Rica (2013 – 2017)

Skills

Go, Python, PostgreSQL, Kafka, gRPC, AWS, Terraform, Datadog, Docker, distributed systems, on-call leadership, mentoring

Certifications

- AWS Certified Solutions Architect — Associate (2021)

Languages

- Spanish (native)
- English (fluent)
